

WESTENDORF INTRODUCES THE ALL-HYDRAULIC SPREADER

DSW-270

GREAT FOR SAND/MANURE MIX

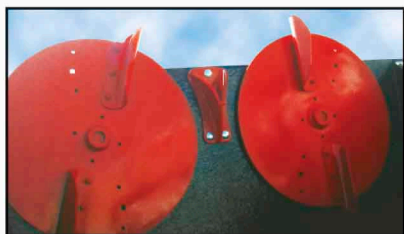

- **NO Leaking**
- **NO Apron**
- **NO Chains**
- **Easy to Clean**
- **Simple Design**
- **Easy to Operate**

Westendorf Manufacturing adds a dump system to its already diverse line of products. The Dump Spreader is the first all-hydraulic spreader on the market today. Its simple design concept and versatility make it the obvious

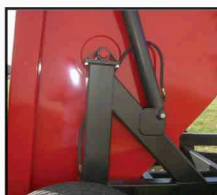

Electronic Flow Control

solution when hauling and spreading liquid or semi-liquid materials. The simple electronic flow control allows operation from the comfort of the cab. Adjust the dial to regulate the dump speed in relation to the

Dual action expellers are hydraulically driven to provide an aggressive and consistent spreading pattern

speed of the expellers for an aggressive and consistent spreading pattern.

Pivots over center of wheel base

Dual action expellers scoop and spread material approximately 20'. This hydraulically powered system allows better shut off and prevents beater backlash. The box has a smooth interior and is continuously welded for strength and durability. Material moves easily on the super-slick industrial grade finish for fast unloading.

There are NO aprons, NO chains, NO seals, NO tracks and NO worries with the Dump Spreader. It doesn't have a rear gate with seals or tracks that can leak, chains that can break or aprons that can freeze-up, even in the coldest of climates.

The Dump Spreader has a unique

patented dump motion that centers the load over the wheel base. Unlike a dump truck, where the center of gravity moves out past the rear wheels, the spreader has a unique dump motion that utilizes hydraulic arms and cylinders with a high pivot mount to maintain a low center of gravity. As a result, the spreader remains balanced and steady at all heights and over rough terrain.

Unique patented dump motion keeps center of gravity low for steady operation over all types of terrain.

It can be used for many applications, not just manure. It will work great as a dump box to haul snow, sand, wood chips, liquid tobacco waste, lime and more.

It quickly mounts on any 3 pt hitch. The tongue has a built-in sturdy support stand that swings out of the way for transport. Struck capacity is 270 cu. ft. or 2000 gallons.
