

# CAT CLAW 3-D GRAB FORK

This new patented item is a new generation grab fork designed with compound capabilities, multiple movements and triple actions. The massive V-shaped curved teeth have a distinctive tapered design and built-in bracing to handle increased side pressures to resist twisting. It crushes, pulls, fills and handles many unforbearing, hard to handle loads with ease.

# Cat Claw

TRIPLE ACTION

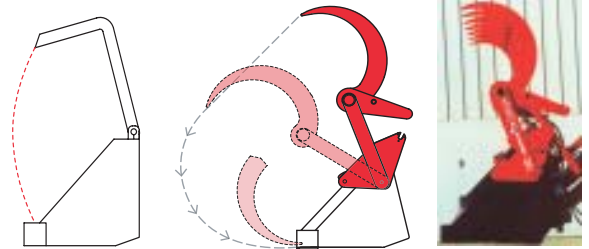

200%  
INCREASED LOAD  
CAPACITIES!

A MATERIAL HANDLING SOLUTION THAT  
**REALLY BITES**  
CUTS HANDLING TIME IN HALF!

GF-84-3D  
GF-96-3D

**Standard Grab Fork**  
Conventional grab forks only have one pivot point allowing the user to trap material in the bucket.

**3-D Cat Claw Grab Fork**  
Two pivot points on the 3-D grab fork allow the user to reach out past the bucket's front edge & over material to pull it back into the bucket.

**No More Shoveling.**  
When open, it sits back behind the front edge of the bucket so you can get flush against the wall and the teeth won't interfere.

Reaches inside a silage tube to easily grab a super-sized load

**Hydraulically Mounted**  
Mount and dismount hydraulically for trouble-free on and off in just minutes. It's there when you need it, and not when you don't!

*Cylinders operate in unison off one hydraulic lever*  
*V-shaped curved teeth with built-in bracing handles increased side pressures*

**NEW**

- 1) Claw in open position sits behind bucket's edge.
- 2) Cylinders reach out past bucket's edge to grab.
- 3) Claw crushes material back into bucket.

## GRAB FORKS

Patented Power-Mount™ Grab Forks make switching from a bucket or spear to a grab fork nearly effortless. In just minutes you can mount or dismount it without using tools.

They are specifically designed for carrying bales and loose materials while keeping your load secure at the source.

# GRAB FORKS

## FEATURES:

- All Westendorf grab forks power mount hydraulically to your bucket without the use of tools
- Curved teeth on the GF-28 and GF-52 have a dual purpose. Use them to dismount the grab fork, or rotate forward to wrap around large round bales
- Sharp teeth easily penetrate round or square bales
- Built-in stands support grab fork for storage
- Self-aligning teepee on bucket makes mounting your grab fork hassle-free

## JIFFY MONSTER GRAB FORK

GF-20

- Three straight teeth
- Quick attach, just hook over the angle iron and secure
- No tools required
- Fits WL-21 and TA-26 buckets

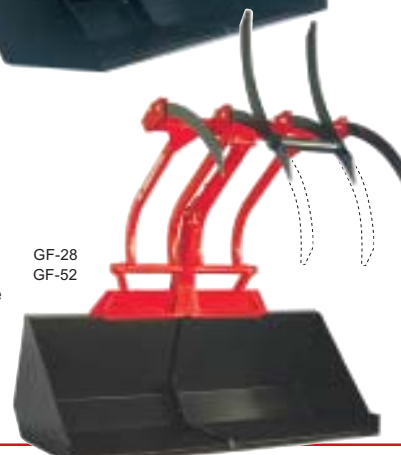

## MONSTER GRAB FORK

GF-51

- Four replaceable *straight* teeth
- Single lever clamping action
- Quick attach, just hook over the angle iron and secure
- No tools required
- Designed specifically for the larger 40 series loaders such as the TA-45/46/48

## MONSTER GRAB FORK

GF-28  
GF-52

- Four replaceable *curved* teeth
- Center teeth extend for handling large round bales
- Quick attach, just hook over the angle iron and secure
- No tools required
- GF-28 fits TA-28/28+/29 and GF-52 is for the 40 series loaders

## TINE BUCKET WITH SABRETOOTH

GF-32

TB-38

- Tine Bucket has eight off-set tines on the bottom with two straight tines on the side
- Excellent for hauling silage and moving bales
- Sabretooth Grab Fork is an economical grapple that bolts over the top edge of the fork bucket or the tine bucket frame

## QUICK MOUNT CLAW

GF-64

- Four replaceable *arched* teeth
- Quick-attach design
- Secure with four wing handles
- Teeth open extremely wide and penetrate bale easily
- No tools required
- Designed for the large 20 series, and 40 & 70 series loaders
