STEPS TO REPAIR CYLINDER

- 1) At the ram end of the cylinder barrel, remove the spiral retaining ring from the top of the gland.
 - NOTE: The G-E gland does not use the spiral retaining ring.
- 2) Gently drive the gland into the barrel using a brass or nonmarring punch until the round retaining ring is visible.
- **3)** Remove the round retaining ring using a pair of long nose pliers. Remove the ram assembly (ram, gland, and piston) from the barrel.
- 4) Notice the direction they're pointing so they can be properly re-assembled.
- 5) Remove the jam nut and/or hex nut from the end of the ram.
- 6) Remove the old seals and rings and replace them with the new seals and rings. (Seal kits are packaged for several different cylinders. You may have extra parts)
- 7) Clean cylinder with cleaner and a clean lint free cloth.
- 8) Lubricate the seals and rings to aid assembly.
- 9) Assemble the cylinder by reversing the order.

CYLINDER REPAIR TIPS

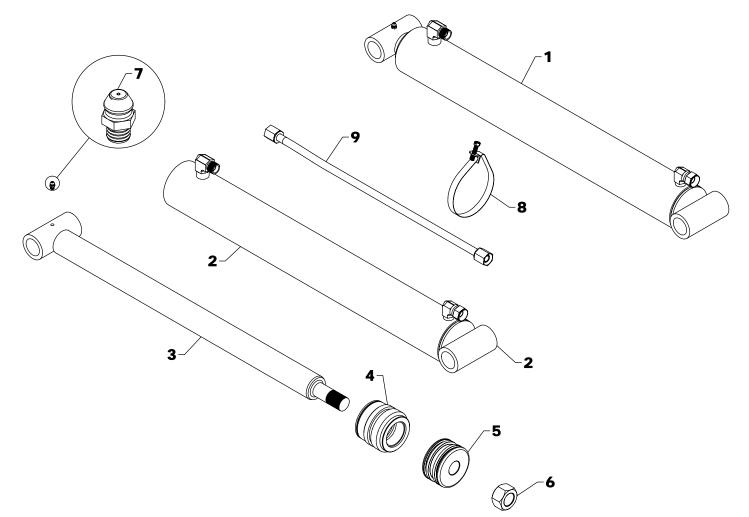

- When disassembling cylinders, keep the parts in correct orientation. Remove parts in sequence.
- Note the direction of the piston and gland. Lay out old seals and parts as they are removed.
- Assemble cylinder in proper order; lubricate to aid assembly.

LIFT CYLINDER REPLACEMENT PARTS
